

No Cook Candy

Ingredients No Cook candy for 1 colony

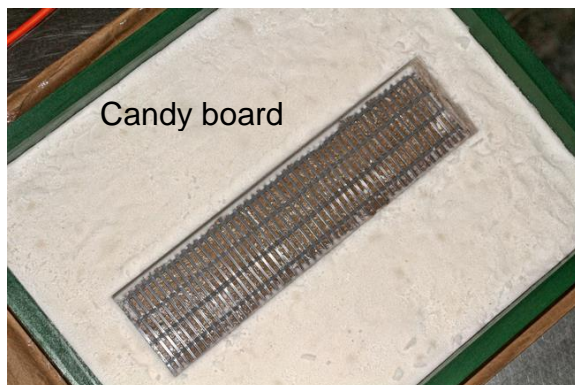

- 10 lbs of table sugar
- 12 tablespoons of hot tap water
- Strong paper plates or a candy mold (must be assembled; see reference below)

Preparation:

1. Place contents of 10 lb bag of sugar into a large mixing bowl.
2. Add 12 tablespoons of hot water into the sugar. Add more hot water if necessary (Remember the more water you add, the longer it will take to harden).
3. Mix by hand or with a large, strong spoon until the mixture is uniformly moist.
4. When using paper plate application, put a piece of parchment paper over it; when using the candy mold, parchment paper is not needed
5. Dispense the mixture into the plate or mold.
6. Tamp mixture down until firm.
7. Let set overnight

Application:

1. Remove the no cook candy from the parchment/paper plate and place it on top of the top bars of the hive.
2. If using a candy mold, place the candy board frame on top of an Imerie shim and place the assembly on top of the brood area
3. Do not expose bees to cold air for more than several seconds
